

Free Your Data with Kmesh

Free Your App Data to Drive Better Business Results

Your line-of-business teams want to take advantage of the best apps and services to drive revenue, whether through cloud, hybrid cloud, or multi-cloud deployments. But, siloed data and the challenge of inter-cloud and intra-cloud data orchestration often hold back cloud-based app initiatives.

One Centrally-Managed Namespace for All Your App Data

Using Kmesh SaaS, you can orchestrate all your application data from a single namespace — regardless of its physical, logical or legal location. As a result, you can help your lines of business deploy apps in innovative ways to support targeted, and evolving, business needs.

Increase the ROI of Your App Investments

AWS, Azure, Google Cloud and others continuously provide innovations that make running your apps in the cloud more efficient and effective. The combination of cloud-based big data, AI, machine learning and analytics present incredible opportunities for your apps and services to attract and retain consumers.

Manage All Your App Data from a Single Dashboard

KLink-Kcloud	Status	KLink Type	Source Access Path	Destination Access Path	Policy Profile	Action
DEMO-AWS-California	✓	Synchronous	192.60.3.112/kmesh1	172.40.10.42/kmesh1	Compression-Enabled	ⓘ

Private Data Centre	AWS	Azure	GCP
KClouds:0 KPoints:0 VIEW CONFIG	KClouds:2 KPoints:1 VIEW CONFIG	KClouds:0 KPoints:0 VIEW CONFIG	KClouds:0 KPoints:0 VIEW CONFIG

By bringing together the best of what each cloud has to offer via secure data orchestration, you will reach new and broader audiences faster and more efficiently. Also, as you identify new target markets or revenue opportunities, provisioning data to support new and expanded apps happens in just a few dashboard clicks.

Simplify Your App-Focused Data Operations with Kmesh SaaS

With Kmesh, you can provide real-time data access, synchronization, and security across any cloud, hybrid cloud, or multi-cloud environment. And you don't need expensive engineering, development, or tools to do it.

Gain Operational Efficiency

Kmesh reduces operational complexity while removing manual steps from your data synchronization processes. It eliminates the need for constant development of workflows, tools and custom projects that use up valuable engineers and SREs. An added benefit comes from data provisioning efficiencies. As you provision cloud data in support of your new or changing app deployments, Kmesh can reduce that time by up to **90 percent**.

Leave Your Infrastructure Unchanged

Kmesh is true SaaS and requires no changes to your infrastructure. It also operates within any existing security architecture, because Kmesh **never** modifies your underlying data sources.

How One Retailer Analyzes Customer Data Faster with Kmesh SaaS

In-country data analysis and compliance with data localization laws

A Europe-based retailer serves a large customer base in China and wanted run extensive customer analytics to optimize product offers to consumers. Yet, China's CSL regulations require all personal user records and shopping cart data to stay within China. By deploying Kmesh SaaS on its AWS and Azure clouds, the retailer can now run Google analytics locally in China with apps that combine data, artificial intelligence, and machine learning. Legally-compliant results are sent to the retailer's European data center, based on policies established in Kmesh, to inform new product promotions in China.
